

Software License Agreement for the Wild Magic 3.x Library

Version 2, November 18, 2006

The Wild Magic version 3.x source code and distribution is licensed under the GNU Lesser General Public License (LGPL), available for reading at

<http://www.gnu.org/copyleft/lgpl.html>

Here are some important points that you should keep in mind about the license. Wild Magic ships with project configurations for static or dynamic libraries. If you use Wild Magic dynamic libraries, then your own software is not considered a derived work, in which case LGPL does not obligate you to use LGPL as the license for your software. However, if you use Wild Magic static libraries, your software is considered a derived work and LGPL obligates you to license your software using LGPL. Use of inline functions are considered by LGPL as leading to derived works. Since Wild Magic uses inlining solely for performance reasons, it is our decision that your use of Wild Magic inlining does not constitute a derived work.
